

Installing Windows 7 via USB/flash drive

99% of our netbooks do not come equipped with USB flash drives. Installing via external DVD drive is one option, but why not use that USB flash drive to install Windows 7? Here is how to do it:

First get HP USB Format tool from [HERE](#). Format it with FAT32 filesystem

Then, mount the ISO using magicDisk (freeware). Download from [here](#)

Open the virtual DVD from My Computer and copy all the contents from the ISO to the flash drive

Lastly, rename the **BOOTMGR** to **NTLDR** and you are done!
