

[How to Upgrade Windows 7 Beta Build 7000 to Windows 7 RC Build 7100](#)

Finally most awaited [Windows 7 RC build 7100 both x86 and x64 leaked](#) on popular [torrent](#)

websites and available for download as installer. You might need to create bootable dvd iso to install on your hard drive or follow this article to [install windows 7 RC using USB drive](#).

You might be surprised to know you wont be able to [install Windows 7 RC on older leaked or beta Windows 7](#)

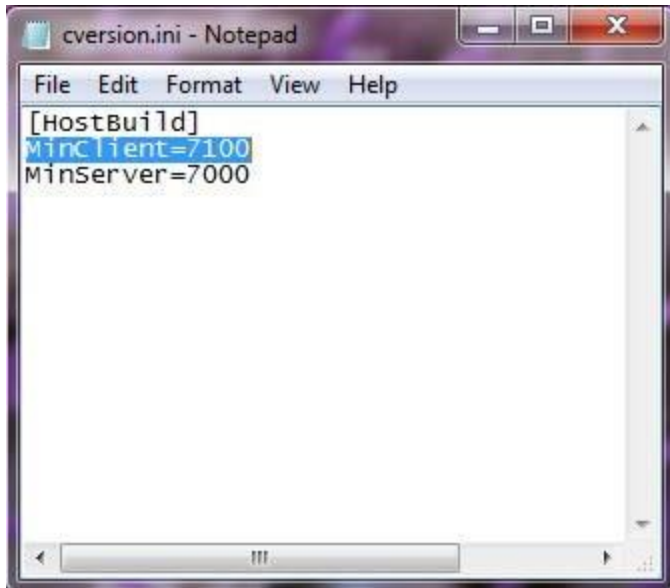

Build. Microsoft has already warned that Windows 7 RC will not allow build to build upgrade.

If you don't want to format your existing Windows 7 Installed drive or want to **install Windows 7 RC on older Windows 7 build (Windows Beta)** then here is how to guide.

How to Upgrade Windows 7 Beta Build 7000 to Windows 7 RC Build 7100

1. [Download Windows 7 RC build 7100](#) (if you downloaded Leaked Windows 7 RC which is not in the form of ISO then Skip to Step Number 3)
2. If you have downloaded Windows 7 RC in the form of ISO DVD then Burn ISO on dvd and copy all files & folder to your Hard Disk Drive. You may use ISO file mounting tool to extract files.
3. Now Access **Source directory** within Widows 7 Copied files & folder.
4. Open the file **cversion.ini** in a text editor like [Notepad](#).
5. Replace **miniclient** value from 7100 to any lower build for e.g **7100 to 7000**,

6. Now Save the file cversion.ini

7. Run installer.

The above steps will be required for an RC to RTM upgrade installation.
